

FOR IMMEDIATE RELEASE

31 October 2005

World's first Windows® CE-driven research-grade electrochemistry meters

Eutech Instruments, a leading manufacturer of electrochemical instruments for water analysis has released the world's first Windows® CE-driven full-colour touchscreen research-grade bench meter in Asia and Europe. The CyberScan Series 6000 meters offer plug 'n' play USB connectivity that allow users to measure, analyse and share data in one meter.

Poised to lead the paradigm shift in laboratory research worldwide, this innovation is the result of the company's continuous efforts to provide efficient solutions for water analysis. Bhaskar Narayanan, Managing Director for Eutech Instruments highlights, "The CyberScan Series 6000 is the first-of-its-kind employing the sophistication of a Windows® CE operating system. Eutech is always on the lookout for new and effective ways to apply emerging technologies to our cutting-edge products. In this case, we took the inspiration from PDA development and designed the CyberScan Series 6000 with today's research professionals in mind."

Context specific help screens guide users through operation. In addition a Windows® CE operating system provides a familiar interface for easy navigation. The CyberScan 6500 complete lab-in-one meter is the first in the world to measure and display up to four different parameters on the same screen. Setup information and data specific to ten different users can be stored separately within the same meter. Internet connection capability within the same meter also enables user to send and receive data easily.

The CyberScan Series 6000 will be launched in Asia and Europe in November 2005. The meters will be showcased at the CIA 2005 exhibition in Singapore between 29 November and 2 December.

About Eutech Instruments

Eutech Instruments is a leading ISO 9001 certified water analysis instruments manufacturer that markets its comprehensive product ranges worldwide through an extensive distributor network. The continuous demonstration of insight into customer needs and product demands has earned the company acclaimed biennial Frost & Sullivan awards for Product Line Strategy.
