Combining Three Testers into One: Eutech Launches a New Series of Waterproof Pocket Testers, Testr[®]11

Eutech Instruments, a leading manufacturer of instruments for water analysis has recently launched the Testr[®]11 Series for Conductivity, Total Dissolved Solids (TDS), and Salinity measurements. In addition to original signature features, the Testr[®] 11 series now measures a wider range of media.

The preceding series, Testr[®] 10, included High, Low and Pure models, which measure solutions with high conductivity, natural water and pure water respectively. "With the new Testr[®] 11 series, we combine the technology of Testr[®] 10 High, Low and Pure so end-users can now take readings from pure water to waste water with one tester," says Mr Bhaskar Narayanan, Managing Director of Eutech Instruments. The new range of testers also comes along with Multi-Point Calibrations for more accurate readings.

At $\pm 1\%$ full scale accuracy, Eutech Testr[®]11 series offers one of the best accuracies available in pocket-sized testers today, with signature features such as simultaneous temperature readouts, adjustable TDS factor, Automatic Temperature Compensation (ATC), manual calibration and user-replaceable sensors. Combined with user-friendly features such as large LCD screens, ribbed body and waterproof to IP67 standards, the Eutech Testr[®]11 series is made for end-users looking for accurate results with portability and affordability.

About Eutech Instruments

Eutech Instruments is a leading ISO 9001 certified water analysis instruments manufacturer that markets its comprehensive product ranges worldwide through an extensive distributor network. For more information, please contact our distributors or visit our corporate website at www.eutechinst.com
